

Lanmark Controls

Lanmark Controls

Lanmark® Controls unites the technology of laser marking with the power of network communication. Offering cost-contained, innovative solutions to laser marking system integrators, with maximum flexibility and complete customer satisfaction. For any industry, the Lanmark Controls software and embedded scan head controller produce the fastest, most stable, and precise laser beam control on the market today. The products easily integrate into fully automated production lines or allow laser marking systems to operate autonomously. Lanmark Controls products are reliable and field-proven.

HARDWARE

- **LEC-1** Ethernet-based Scan Controller
Next-generation smart controller attaches to an Ethernet network or runs locally under pendant or PLC (Programmable Logic Controller) control, eliminating the need for a local PC. Other modules complementing the LEC-1 for the use of specific lasers, I/O acquisition and data entry:
- **IO-EC 1000**
- **OEM I/O Module**
- **End User I/O Module**
- **Fiber Laser Interface Board**
- **General Purpose Laser Interface Board**
- **MAESTRO™**
All-in-one laser marking system control unit combining LEC-1 laser controller, Winlase LAN marking software, I/O hardware, and scan head power supply
- **J-10 H & J-10 P**
Low-cost pendants eliminating the need for a local PC support for the laser marking system

SOFTWARE

- **WINLASE® LAN**
Next generation laser marking software designed to communicate with different controller cards via Ethernet (LEC-1, CT EC1000)
- **COM AUTOMATION SERVER**
Built-in server for a quick development of customized user interfaces (streaming mode)

closer to you.
Today*

the European support center for Lanmark products

Intré

Intré has been realizing high-technology software projects for more than a decade with strong attention to product quality, cost containment and respect of deadlines.

Visit our website <http://www.intré.it> for more information!

From January 2010, Intré will be the official support center for Lanmark products distributed in Europe, able to offer on the entire European territory a free support service dedicated to:

- Systems design based on Lanmark products
- Integration with other hardware and software components
- Problem-solving related to the use of Lanmark hardware and software

Support

Intré is able to give you support on:

- **Winlase® LAN use**
- **Software development based on COM Automation Server**
- Cooperation for **laser system projects** realized with Lanmark products
- **Feasibility studies** of your solutions with Lanmark products
